

The Only Complete Line of Vulcanizers in the World

They are designed to meet the requirements of every user, from the motorist who keeps one runabout, to the repair shop handling quantities of the largest repairs.

SHALER Vulcanizers Electric - Steam - Alcohol Heated

The Electric Vulcanizers operate from city lighting current, the most convenient source of heat. Reliability and ease of operation are insured by a temperature control that is automatic and does not need watching or regulating. They fit any sized tires on tread or near rim; make all kinds of repairs from a nail puncture in a tube to the largest casing blow-out.

The Shaler Steam Vulcanizer is the only steam vulcanizer that can be safely used by any motorist, not because of the steam it contains, but because the temperature of the steam is automatically controlled by a thermostat. Although possibly unnecessary in a vulcanizer so controlled, a safety-valve gives the operator absolute protection against explosion.

The Stitch-In-Time is identical with the Steam Vulcanizer except that instead of transmitting the heat to the vulcanizing surface through the medium of steam, it transmits it by direct radiation. Guaranteed to work perfectly.

Remember that every one of these vulcanizers is sold upon our signed guarantee that it will work perfectly; anyone who can read our instruction book can make perfect repairs every time.

*You will find the Shaler Vulcanizers in the catalogues of all the largest automobile accessory houses. We will mail you a free copy of the famous handbook **CARE AND REPAIR OF TIRES** if you will send us the name of the firm from whom you buy your automobile supplies; or if you desire, we will tell you the nearest distributor where you can see the models suited to your own use.*
